

Assignment

FEB/ DBT/128

Database Technologies

Diploma in Advance Computing (PG-DAC)

Trigger

1. Write a trigger (named insertStudent) that saves the message "Record inserted successfully" in LOG(current date, current time, and message columns) table as soon as you insert the record in STUDENT table.

```
DROP TRIGGER IF EXISTS insertStudent;
DELIMITER $

create TRIGGER insertStudent after insert ON student for each row
BEGIN
    insert into log (cdate, ctime , message)
    values(CURDATE(), CURTIME(), "Record inserted successfully");
END $

DELIMITER ;
```

2. Write a trigger (named insertDuplicate) on STUDENT table, that as when we INSERT a record in STUDENT table the same record should get duplicated (INSERTED) in STUDENT_LOG table. (Create STUDENT_LOG table, having the same structure as STUDENT table).

```
DROP TRIGGER IF EXISTS insertDuplicate;
DELIMITER $
CREATE TRIGGER insertDuplicate AFTER INSERT ON student FOR EACH ROW

BEGIN
    insert into student_log(ID, namefirst, namelast, DOB, emailID)
    values (new.ID, new.namefirst, new.namelast, new.DOB, new.emailID);

END $
DELIMITER ;
```

3. Write a trigger(named updateStudent) on STUDENT table, that as soon as we UPDATE student emailID column data in STUDENT table, the update record should get inserted in STUDENT_LOG table.

```
DROP TRIGGER IF EXISTS updateStudent;
DELIMITER $
```

```
CREATE TRIGGER updateStudent after UPDATE on student for each row
BEGIN
```

```
    IF old.emailID <> new.emailID THEN
        INSERT into student_log(ID, namefirst, namelast, DOB, emailID)
        values(new.ID, new.namefirst, new.namelast, new.DOB, new.emailID);
    END IF ;
```

```
END $
DELIMITER ;
```

4. Write a trigger (named deleteStudent) on STUDENT table, that as soon as we DELETE any record from STUDENT table, then that record should get inserted into STUDENT_LOG table.

```
DROP TRIGGER IF EXISTS deleteStudent;
DELIMITER $
CREATE TRIGGER deleteStudent AFTER DELETE ON student for each row
BEGIN
    insert into student_log(ID, namefirst, namelast, DOB, emailID)
    values(old.ID, old.namefirst, old.namelast, old.DOB, old.emailID);
```

```
END $
DELIMITER ;
```

5. Write a trigger (named insertValidation) on STUDENT table, that if today is Sunday then, no record should get inserted in STUDENT table.

```
DROP TRIGGER IF EXISTS insertValidation ;
DELIMITER $

CREATE TRIGGER insertValidation BEFORE INSERT ON student for each row
BEGIN

    if dayname(curdate()) = 'Sunday' THEN
        signal sqlstate '45000' set message_text = "can't insert today";
    END IF ;

END $
DELIMITER ;
```
