USE *student_phone*, *student_address*, *faculty_phone*, *faculty_address*, *batch_students*, *course_batches*, *student_qualifications*, *faculty_qualifications*, *course_modules*, *modules*, *faculty*, *student*, *course*, *student_cards*, and *student_order* relation to solve the following queries.

1. Display all <i>student</i> and with their address from <i>student</i> and <i>student_address</i> tables.
<pre>select s.namefirst, s.namelast, sa.address from student AS s, student_address AS sa where s.id=sa.id;</pre> <pre>select namefirst, namelast, student_address.address from student, student_address where student.id=student_address.id;</pre>
2. Display (<i>namefirst</i> , <i>namelast</i> , <i>emailID</i> , and <i>student_qualification</i> details) from <i>student</i> and <i>student_qualification</i> relations.
<pre>select s.namefirst, s.namelast, s.emailID, q.college, q.university from student as s, student_qualifications as q where s.id = q.id;</pre>
3. Display (<i>namefirst</i> , <i>namelast</i> , <i>emailID</i> , <i>college</i> , and <i>university</i>) who have studied in 'Yale University'. (Use <i>student</i> , and <i>student_qualification</i> relation)
<pre>select s.namefirst, s.namelast, s.emailID, q.college, q.university from student as s, student_qualifications as q where university='Yale University' And s.id = q.id;</pre>
4. Display all student details his phone details and his qualification details. (Use <i>student</i> , <i>student_phone</i> and <i>student_qualification</i> relation)
<pre>select * from student, student_phone, student_qualifications where student.id=student_phone.id=student_qualifications.id;</pre>
5. Display (<i>studentID</i> , <i>namefirst</i> , <i>namelast</i> , <i>name</i> , <i>college</i> , <i>university</i> , and <i>marks</i>) whose name is 'BE'. (Use <i>student</i> , and <i>student_qualification</i> relation)
<pre>select s.ID, s.namefirst, s.namelast, q.name, q.university, q.marks from student AS s, student_qualifications AS q where name='BE' AND s.id = q.id;</pre>

6. Display the module name and the duration of the module for the batch "Batch1".
<pre>select m.name, m.duration, c.name from modules AS m JOIN course_batches AS c ON m.id =c.id where c.name="Batch1";</pre>
7. Display student information along with his batch details who have joined in "Batch1".
<pre>select s.namefirst, s.namelast, s.emailID, s.DOB, c.name, c.courseID, c.starton, c.endson, c.capacity from student AS s Join course_batches AS c ON s.id=c.id AND <u>c.name</u>="Batch1";</pre>
8. Display module names for "PG-DAC" course.
<pre>select c.name, m.name from course AS c JOIN modules AS m where c.id=m.id and c.name="PG-DAC";</pre>
9. Display <i>namefirst, namelast, and batch name for all students.</i>
<pre>select s.namefirst, s.namelast, c.name from student AS s JOIN course_batches AS c ON s.id=c.id;</pre>
10. Display (<i>namefirst, namelast, phone number, and emailid</i>) whose student ID is 13.
<pre>select s.namefirst, s.namelast, p.number, s.emailID from student AS s JOIN student_phone AS p where s.id = p.id AND s.id=13;</pre>
11. Display (<i>namefirst and count the total number of phones a student is having</i>) for all student.
<pre>select s.namefirst, count(*) AS phone_count from student AS s JOIN student_phone AS p ON s.id=p.id group by s.id, s.namefirst;</pre>
12. Get student's (<i>namefirst, namelast, DOB, address, name, college, university, marks, and year</i>).
<pre>select s.namefirst, s.namelast, s.DOB, a.address, q.name, q.college, q.university, q.marks, q.year from student AS s Join student_address AS a JOIN student_qualifications AS q ON s.id=a.id=q.id;</pre>
13. Get (<i>namefirst, namelast, emailID, phone number, and address</i>) whose faculty name is 'ketan'.
<pre>select f.namefirst, f.namelast, f.emailID, p.number, a.address from faculty AS f JOIN student_phone AS p JOIN student_address AS a ON f.id = p.id = a.id where f.namefirst="ketan";</pre>
14. Get(<i>course name and batch name</i>)for all courses.
<pre>select c.name, b.name from course AS c JOIN course_batches AS b ON c.id = b.id;</pre>
15. Get all student details who have taken admission in 'PG-DAC' course.
<pre>select s.namefirst, s.namelast, s.emailID, s.DOB, c.name from student AS s JOIN course AS c where c.name="PG-DAC";</pre>

16. Get all course details which had started on '2016-02-01'.
<code>select c.name, c.duration, c.summery, b.starton from course AS c JOIN course_batches AS b ON c.id=b.id where b.starton="2016-02-01";</code>
17. Get all course name and module names which are taught in 'PG-DAC' course.
<code>select c.name, m.name from course AS c JOIN modules AS m where c.name="PG-DAC";</code>
18. Display how many modules are taught in each course.
19. Display the student detail who are 'BE' graduate.
20. Display all distinct course detail, where module for every course is designed.
21. Display studentID who have more than 2 phone numbers.
22. Display the courses where 'JAVA1' is taught.
23. Display all student who have taken admission in 6 months course.
24. Write a query to display the output in the following manner. 'saleel', 'Aadhaar, Driving Licence, PAN, Voter ID, Passport, Debit, Credit' Arrange the data is ascending order of <i>nameFirst</i> .
25. Write a query to display the output in the following manner.
